

# Final report of our website!

## First Plans:

- Website about Information about Hackers, Security and Cracks.
- Good and fitting Design for the Website
- Adding multiple Games based around Hacking (encrypting, decrypting)
- Simple Login with Database (for usernames/passwords and leaderboards)

## Final Results:

- Website about Information about Hackers, Security and Cracks.
- Good and fitting Design for the Website
- Adding multiple Games based around Hacking (encrypting, decrypting)
- Base for login but failed to do Database.

**Remark:** Almost everything worked out as planned. Only flaw was the Database which we tried to get to work for 5 Hours but couldn't manage to do. Overall, we think we did a good job.

## ABOUT

This Page is about hackers, crackers, attacks and security. Here, you can read all about what hackers use, who hackers work for and how they do it. You can read about Cracks, when they were first used and what type of cracks there are. You can also read about the security against hackers and how they work.

To get started just click on the top navigation bar to get to the theme that your interested in.
